logs

```
systemctl status httpd.service -l --no-pager sudo journalctl -u httpd.service --since today --no-pager
```

što je na tom portu

```
ss -4 -tlnp | grep 80
```

```
ss -6 -tlnp | grep 80
```

```
systemctl restart nginx
```

```
sudo pkill -f nginx & wait $! sudo systemctl start nginx
```

```
nginx listen
```

```
grep -r listen /etc/nginx/*
```

The domain key is here: `/root/.acme.sh/cwp_certs/ftp.mellon-dev.com/ftp.mellon-dev.com.key` Multi domain='DNS:ftp.mellon-dev.com,DNS:cpanel.mellon-dev.com' ftp.mellon-dev.com:Verify error:Invalid response from <http://ftp.mellon-dev.com/.well-known/acme-challenge/UgUKRJ1mLuOdkldlBis1UtB7SAdlXtu1ww1R2NKumOE> [159.69.105.26]: Please check log file for more details: `/root/.acme.sh/acme.sh.log`

```
sh /scripts/update_cwp
```

```
ssl logs tail -f /var/log/cwp/autossl.log
```

nakon CWP UPDATE ako ne radi nginx ili apache2

```
systemctl daemon-reload
```
