

Uređivanje MOTD

Savršeno! Možemo kombinirati oba pristupa:

-  **Zadržati** `/etc/motd` za pozdravnu statičnu poruku (npr. "Dobrodošli na moj home server").
-  `/etc/profile.d/welcome.sh` koristiti za dinamičke podatke (IP, hostname, linkovi, itd).

1. Uredi `/etc/motd`

Otvori za uređivanje:

```
bash
sudo nano /etc/motd
```

Unesi, na primjer:

```
shell
#####
#                               #
#   Dobrodošli na moj Home Server!      #
#                               #
#   Marko Kopčić                #
#####
```

Spremi i zatvori (`Ctrl + O` , `Enter` , `Ctrl + X`).

2. Kreiraj `/etc/profile.d/welcome.sh`

Kreiraj novi skript:

```
bash
sudo nano /etc/profile.d/welcome.sh
```

Unesi ovo:

```
bash
```

```
#!/bin/bash
```

```
LOCAL_IP=$(hostname -I | awk '{print $1}')
PUBLIC_IP=$(curl -s ifconfig.me)
HOSTNAME=$(hostname)
DATE=$(date +"%a %d %b %Y %H:%M:%S")
```

```
echo -e "\e[0;32m" # zelena boja
echo "
echo "  □ $HOSTNAME | $DATE"
echo "  □ LAN: $LOCAL_IP"
echo "  □ WAN: $PUBLIC_IP"
echo "  □ Admin: http://pi.local:9090"
echo "  □ Docs: http://docs.pi.local"
echo "
echo -e "\e[0m"
```

Zatim daj mu dozvolu za izvršavanje:

bash

```
sudo chmod +x /etc/profile.d/welcome.sh
```
